

Enhancing Project Visibility

Increasing Developer Productivity

Fostering Product Team Collaboration

Tasktop Overview

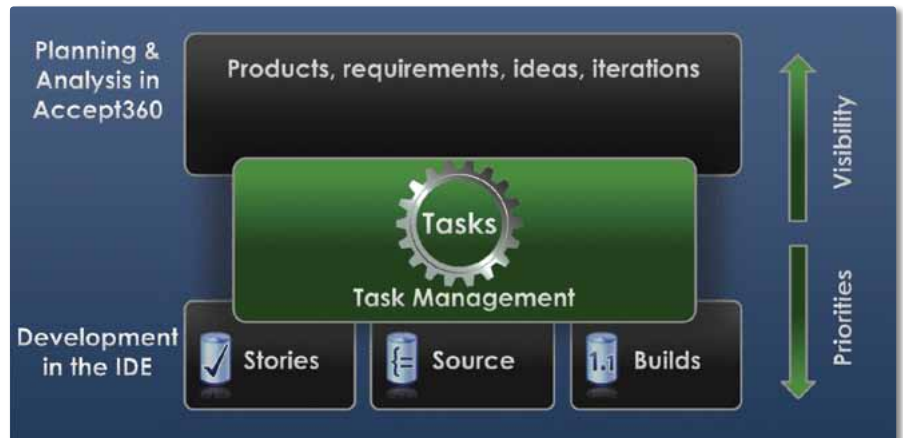

As the leader in Agile ALM integration and productivity, Tasktop delivers dramatic and measurable increases in developer productivity through its highly intuitive task-focused interface, automated time tracking and one-click multi-tasking. Tasktop provides Accept360 integration for Eclipse and Visual Studio development environments as well as interoperability with 50+ ALM systems for visibility and traceability in heterogeneous ALM environments.

Accept360 - Tasktop Integration Overview

Tasktop integrates Accept360 with software developers' IDEs and provides interoperability with more than 50 ALM solutions such as Microsoft TFS, IBM Rational, JIRA, Version One and Rally.

The IDE integration provides direct access to Accept360 from the Eclipse or Visual Studio IDE, making it easy for developers to adopt and keep Accept360 up to date for unprecedented project management visibility. The client-side interoperability allows Accept360 to be used alongside existing legacy ALM solutions and provides traceability across systems without disrupting existing infrastructure.

Tasktop's task-focused Interface technology automatically tracks source code, web pages and documents related to each task (e.g. requirement, defect) and filters the interface to show only the relevant information, enabling one click multitasking and interruption recovery.

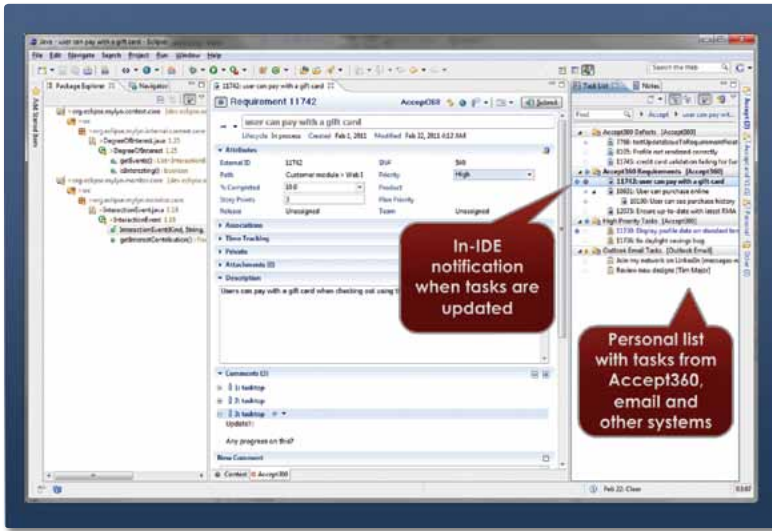

Integration Approach

Tasktop provides a unified interface allowing access to Accept360 alongside other ALM systems from a single user interface. Artifacts from multiple systems are presented side by side making it easy to access multiple systems and create and navigate dependencies and other relationships between them. Other integration highlights include:

- Emphasizes presentation rather than replication
- Breaks down the silos between development and business analysts for unprecedented collaboration
- Avoid synchronization, replication, and conflict resolution headaches
- Client-side solution translates to undisrupted servers and no new servers required
- Respects fine-grained access control, permissions and auditing
- Data replication and/or synchronization provided in addition to the unified interface

Tasktop Enterprise for Accept360- Key Capabilities:

Enhancing Project Visibility

Task List

- Accept360 stories, defects and tasks appear in personal task list within the IDE
- Instant local search
- Integrated change notifications

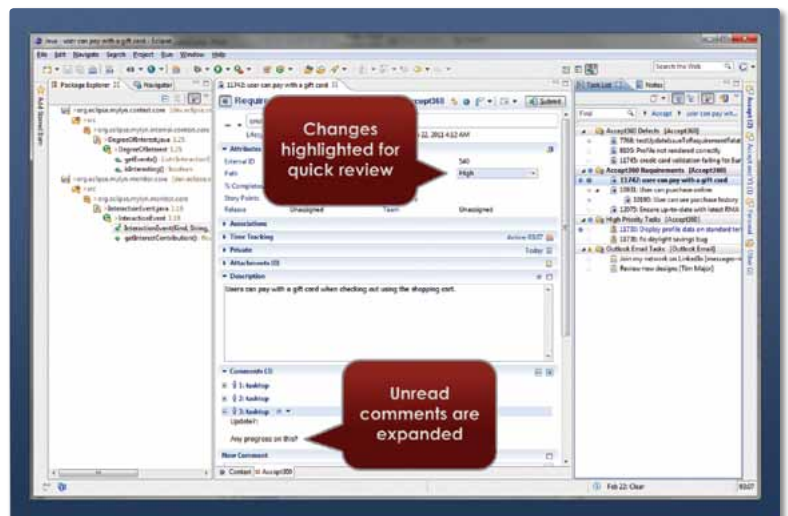

Benefits: Increases developer adoption, Improves project visibility

Increasing Developer Productivity

Task Editor

- Review and update Accept360 from Eclipse
- Changes highlighted for quick review
- Provides offline access
- One click interruption recovery- relevant code, editors, web pages and documents restored with a click

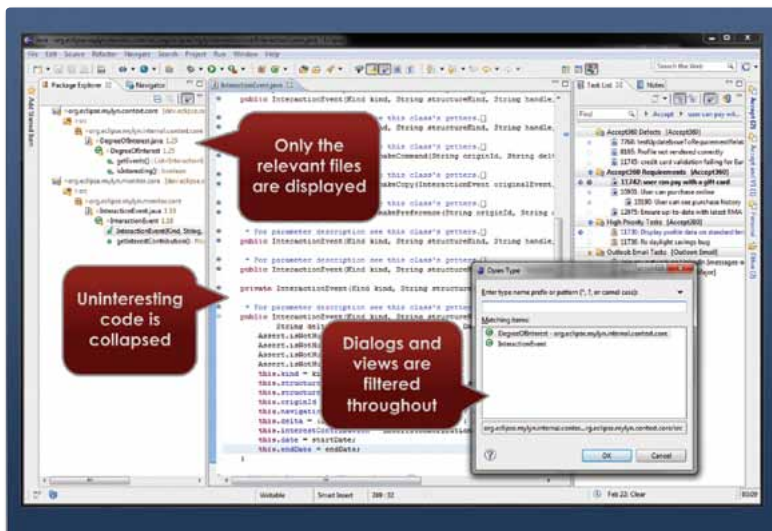

Benefits: Eliminates email-web-IDE cycle, facilitates task-oriented communication for distributed teams, saves time wasted from interruption recovery

Context-Focused Programming

- See only the source code and web pages relevant to each task
- Navigate from source code to the associated requirement in Accept360
- Filter the UI to show only the relevant code, web pages and documents

Benefits: Increases developer productivity, facilitates knowledge capture, promotes reuse and transfer.

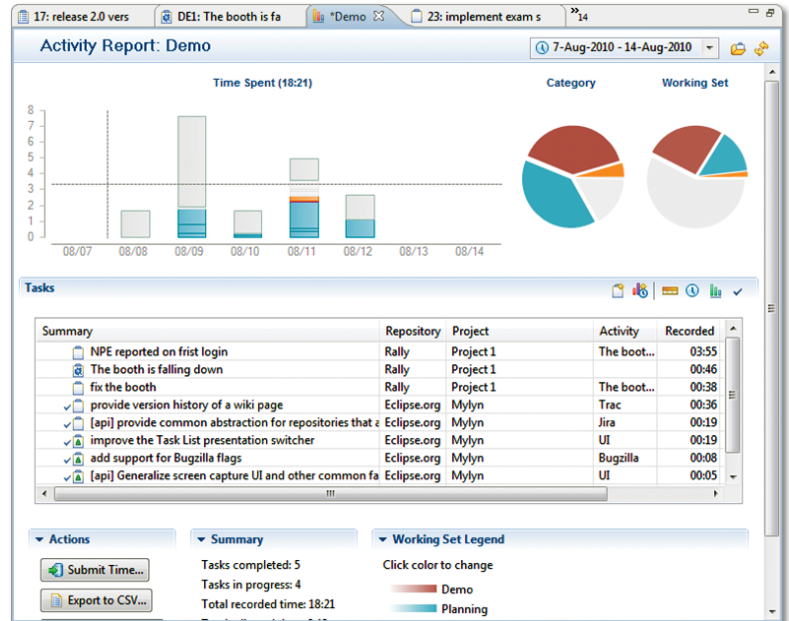

Time Tracking

- Automatically track time spent on each story or defect
- Adjust time to account for meetings, design time, etc.
- Create and export time tracking reports
Benefits: Accurate visibility and improved estimation, ensures better quality inputs to plans for consistent and repeatable planning and delivery cycles.

Offline access to Accept360

- Access Accept360 remotely, offline when traveling
- Access relevant documents and web pages for offline programming
Benefits: Makes communication on the go easy and access to relevant documents and web pages effortless.

Key Benefits

MANAGER BENEFITS

- Provides unprecedented project status visibility
- Reduces cost by enabling interoperability and gradual migration across more than 50 ALM systems without disrupting existing servers
- Produces a measurable 50% increase in productivity
- Enables accurate time tracking based on recorded actuals
- Delivers ROI by leveraging existing underused investments in Agile ALM with no new servers
- Facilitates communication in distributed team environments
- Provides traceability from source code to requirements, defects and stories

DEVELOPER BENEFITS

- Dramatically reduces time spent keeping ALM systems up to date without leaving the IDE
- Enables one-click multitasking and interruption recovery
- Eases adoption of Accept360
- Makes communication around code and the sharing of expertise effortless

Fostering Product Team Collaboration

Multi-vendor interoperability for ALM stacks

- Tasktop provides a unified interface that allows third party systems to be accessed alongside Accept360 and enables creation and navigation of dependencies and other relationships across multiple systems.

Benefits: Leverage these integration and synchronization capabilities for full traceability and visibility across heterogeneous tool environments with Accept360 as the system of record.

Share relevant information with colleagues

- Provide the ability to track the context of relevant documents and web pages associated with Accept360 tasks
- Relevant documents, tasks easily made available to another developer when ownership is passed

Integrate with other systems and platforms

- Tasktop provides a rich desktop client for Accept360 with support for Windows, Linux, and Mac (beta) platforms

Accept Corporation
